

GitHub SSH Setup Guide (macOS)

1. Check Existing SSH Keys

Command

```
ls -al ~/.ssh
```

If you don't see `id_ed25519` and `id_ed25519.pub`, create a new key.

2. Generate SSH Key

```
ssh-keygen -t ed25519 -C "your_github_email@example.com"
```

Press Enter for the default save location. Press Enter twice for an empty passphrase.

3. Start SSH Agent

```
eval "$(ssh-agent -s)"
```

4. Add SSH Key

```
ssh-add ~/.ssh/id_ed25519
```

5. Copy Public Key

```
cat ~/.ssh/id_ed25519.pub
```

Copy the full line beginning with `ssh-ed25519`.

6. Add Key to GitHub

GitHub → Settings → SSH and GPG keys → New SSH key.

Title: Jigar Mac mini

Key type: Authentication Key

Paste the copied key and save.

7. Switch Remote to SSH

```
git remote set-url origin git@github.com:jigarro5/DSA_GIT.git
```

```
git remote -v
```

8. Test Connection

```
ssh -T git@github.com
```

Type yes if prompted. Success message: Hi jigarro5! You've successfully authenticated.

9. Push Repository

```
git push -u origin main
```

Troubleshooting

Permission denied (publickey): Verify your key is added to GitHub, check `git remote -v`, and test again with `ssh -T git@github.com`.
